<b>UG</b>	<b>Department: Metallurgical and Materials Engineering</b>
<b>Course Code:MTT-301</b>	<b>Course Name: Foundry Technology</b>
<b>Credit:4</b>	<b>L-T-P: 3-1-0</b>
<b>Version:</b>	<b>Approved on:</b>
<b>Pre-requisite course:</b>	
<p><b>Syllabus</b></p> <p>Patterns: Functions, classification, materials, allowances and design considerations. Molding sands: General characteristics, ingredients, special additives, binders, their effect on the properties of moulding sand, parting and facing materials, Cores and their types. Casting processes: Sand mould casting, shell mould, CO<sub>2</sub> mould Casting, centrifugal and investment casting, gravity die-casting and pressure die casting.</p> <p>Solidification of castings. Gating and risering: basic requirements of gating and feeding system, design of gating system, types of gates, design of feeders, use of exothermic compounds, exothermic sleeves, chills and padding.</p> <p>Melting furnaces: Selection of remelting furnace, simple sketch and brief description of gas fired and electric furnaces for melting of alloys. Cast iron foundry practice: Cupola melting practice, production of SG cast iron. Melting practice for Al, Mg and Cu. Casting defects: causes and remedies. Quality control in foundry.</p> <p><b>Books:</b></p> <ol style="list-style-type: none"> <li>1. R.W. Heine, C.R. Loper, P.C. Rosenthal, Principles of Metal Casting, Tata McGraw Hill Pub. Co. Ltd., New Delhi</li> <li>2. P.L. Jain, Principles of foundry Technology, Tata McGraw Hill Co. Ltd., New Delhi.</li> <li>3. P.L. Jain, Tool Engineering for Metal Casting Processes, Tata McGraw Hill Co. Ltd., New Delhi.</li> <li>4. H.F. Taylor, M.C. Flemings, J. Wulf, Foundry Engineering, Wiley Eastern Ltd., Delhi.</li> <li>5. Foundry Technology, D.Kumar &amp; S.K. Jain, CBS, Publishers, New Delhi.</li> <li>6. P.C. Mukherjee, Fundamentals of Metal Casting Technology, Oxford &amp; 1BH Pub. Co. Pvt. Ltd., New Delhi.</li> </ol>

<b>UG</b>	<b>Department: Metallurgical and Materials Engineering</b>
<b>Course Code:MTT-303</b>	<b>Course Name: Particulate Materials</b>
<b>Credit:4</b>	<b>L-T-P: 3-1-0</b>
<b>Version:</b>	<b>Approved on:</b>
<b>Pre-requisite course:</b>	
<b>Syllabus</b> Introduction & Historical background of powder metallurgy. Powder Production: General principles of mechanical, chemical, atomization and electrolytic method of metal and alloy powders production. Powder Characterization: Chemical composition, Microstructure, size and size distribution, shape, surface area, flow rate, apparent and tape density. Compressibility, pyrophoricity and toxicity of metallic powders. Powder conditions: Annealing, mixing and blending and their mechanics, powder mixers. Cold compaction: Compaction in rigid dies, uniaxial and biaxial compaction, mechanical and hydraulic presses. Hot compaction: Hot pressing, extrusion and powder forging. Sintering : Basic stages of sintering and mechanisms involved, liquid phase sintering, sintering furnaces, sintering atmospheres. Applications: Porous PM parts viz. bushes, filters, and bioimplants, dispersion strengthened materials, cemented carbides.	
<b>Books:</b> 1. J.S. Hirbchorn – Introduction to Powder Metallurgy (APMI) 2. R.M. German – Powder Metallurgy Science (MPIF) 3. F.V. Lenel – Powder Metallurgy : Principles & Applications (MPIF) 4. A.K. Sinha – Powder Metallurgy 5. R.H.T. Dixon & A. Clayton – Powder Metallurgy for Engg.(Brighton)

<b>UG</b>	<b>Department: Metallurgical and Materials Engineering</b>
<b>Course Code:MTT-305</b>	<b>Course Name: Non-Ferrous Extractive Metallurgy</b>
<b>Credit:4</b>	<b>L-T-P: 3-1-0</b>
<b>Version:</b>	<b>Approved on:</b>
<b>Pre-requisite course:</b>	
<p><b>Syllabus</b></p> <p>Aluminium: Occurrence of Bauxite, Bayer’s process for production of alumina. Alternatives to Bayer’s Process. Hall-Heroult Process-Conventional and New Materials for construction of Aluminium reduction cell, Nature of electrolyte, Electrolysis of alumina with emphasis on physicochemical principles and secondary-reactions.Factors affecting current efficiency. Alternatives to Hall-Heroult Process. Refining of Aluminium.</p> <p>Copper: Occurrence of copper ores. Roasting, Matte smelting,converting and refining process as applied to copper production andtheirphysico-chemical aspects.Single step and multistep continuous processes. Hydrometallurgical process for production of primary copper. Recovery of copper from copper slag. Treatment of refractory copper ores.Nickel&amp; Cobalt: Ocurrence of Nickel &amp; cobalt Ores.Pyrometallurgical&amp; Hydrometallurgical techniques for Nickel andCobalt production and refining.Lead and Zinc: Occurrence of Lead and Zinc ores. Pyrometallurgicaland Hydrometallurgical Processes for lead and zinc production and their physico-chemical aspects. Refining of lead and zinc , Recovery of by products.</p> <p><b>Books:</b></p> <ol style="list-style-type: none"> <li>1. Extractive Met. Of Copper – Biswas&amp;Daven Port</li> <li>2. Extraction of Non-ferrous Metals – Ray/Shridhar</li> <li>3. Non-ferrous Extractive Metallurgy – Bray</li> </ol>

<b>UG</b>	<b>Department: Metallurgical and Materials Engineering</b>
<b>Course Code:MTT-307</b>	<b>Course Name: Electrometallurgy &amp; Corrosion</b>
<b>Credit:4</b>	<b>L-T-P: 3-1-0</b>
<b>Version:</b>	<b>Approved on:</b>
<b>Pre-requisite course:</b>	
<b>Syllabus</b> Principles: Faradays' laws of electrolysis, current efficiency, current density, electrode potentials, EMF series, Galvanic series, Nernst Equation, Polarisation, Mixed potential theory, Pourbaix-pH diagrams, passivity- theory & applications. Electrodeposition: Classification and mechanism of electrodeposition processes. Electroplating of copper, Nickel and Chromium. Alloy plating and electroless plating. Corrosion: The relevance of corrosion studies, forms of corrosion, Uniform, Galvanic, Crevice, Pitting, intergranular, stress corrosion cracking, corrosion fatigue, hydrogen embrittlement, Dealloying. Corrosion prevention and control by various methods- change of metal composition, design improvement, inhibitors, coatings and electrochemical methods of protection. <b>Books:</b> 1. An introduction to metallic corrosion & its prevention by Rajnarain 2. Corrosion Engineering by Mars G. Fontana 3. Electroplating by Lowenheim

<b>UG</b>	<b>Department: Metallurgical and Materials Engineering</b>
<b>Course Code:MTP-311</b>	<b>Course Name:Powder Metallurgy</b>
<b>Credit:2</b>	<b>L-T-P: 0-0-3</b>
<b>Version:</b>	<b>Approved on:</b>
<b>Pre-requisite course:</b>	
<b>Syllabus</b> <ol style="list-style-type: none"><li>1. Sampling metal powder</li><li>2. Determination of hydrogen loss for metal powder</li><li>3. Determination of acid insoluble in Cu powder</li><li>4. Determination of sieve analysis of metal powders</li><li>5. Determination of flow rate of free flowing metal powders using Hall flow meter</li><li>6. Determination of apparent density of free flowing metal powders using Hall Flow Meter</li><li>7. Determination of green strength for un-sintered P/M compact</li><li>8. Determination of compressibility of metal powder</li><li>9. Determination of density of compacted or sintered P/M product</li><li>10. Determination of tensile properties of P/M product</li></ol>

<b>UG</b>	<b>Department: Metallurgical and Materials Engineering</b>
<b>Course Code:MTP-313</b>	<b>Course Name:Foundry</b>
<b>Credit:2</b>	<b>L-T-P: 0-0-3</b>
<b>Version:</b>	<b>Approved on:</b>
<b>Pre-requisite course:</b>	
<b>Syllabus</b> <ol style="list-style-type: none"><li>1. Determination of basic properties of molding sand</li><li>2. Effect of varying moisture and clay content on permeability</li><li>3. Green compressive strength and shatter index of moulding sand</li><li>4. To find out grain fineness no. of silica sand</li><li>5. Melting and casting of Al-Si alloys &amp; to study the effect of grain refinement and modifier</li><li>6. Casting defects and their remedial measures</li><li>7. Techniques to improve the efficiency of furnace</li><li>8. To study the recent modifications in cupola furnace</li></ol>
